PROFILE

Technical product manager with 3+ years of hands-on C++/C# engineering behind real-time, networked products shipped on PC and mobile. I turn stakeholder needs into prioritized roadmaps and requirements, validate them with telemetry and KPIs, and remove the process risks that slow cross-functional delivery.

EXPERIENCE

Technical Product Manager · 07/2026 – Present

MH3D · Medical imaging (cancer detection) · Remote, USA

- Ranked single points of failure blocking client installs by business cost; first fix turned per-detector calibration into a technician-runnable tool, removing engineering from every install.
- Restructuring scattered product documentation into a single source of truth as the company prepares for FDA-regulated development.

Software Engineer - founding team (2nd hire) · 02/2024 – 04/2026 (part-time until 04/2025)

Stealth game studio (seed-stage, founded by ex-Bungie leads) · Pre-Release R&D · Remote, USA

- Scoped and built core systems (player economy, progression, server-authoritative conflict resolution) in C++/C#, turning design goals into technical requirements sequenced against milestones.
- Built a single source of truth from scattered docs: onboarding dropped from 2 weeks to 3 days, new features took 1 requirements meeting instead of 3, and the team stopped losing ~30 min/week hunting for information on calls.
- Interviewed and onboarded senior leadership hires as the team grew from 2 to 8.

Software Engineer · 05/2023 – 04/2025

Billionworlds (Yield!) · Oslo, Norway

- Built performance-critical runtime systems in C++ and C#, including a simulation engine and rule-based decision-making algorithms (behavior trees & finite state machines).
- Set a sub-2s performance budget for worst-case state recomputation across PC, mobile, and Steam Deck, then cut latency from 6s+ to meet it on the weakest target hardware.
- Defined retention KPIs and built the pipeline from player clients to PostgreSQL and Power BI; the insights shaped design priorities and drove a 30% retention increase.
- Trained junior teammates in technical workflows.
- Managed 10+ external localization vendors, delivering every language on schedule.

Release Operations Coordinator · 11/2020 – 05/2023

Daedalic Entertainment · Hamburg, Germany

- Shipped 12 titles across 3 storefronts with 0 missed certification deadlines, managing 10+ language localizations, marketing assets and storefront presentations.
- Built Power BI dashboards turning early-access telemetry into live player insights for 50+ developers; used the data to argue for prioritizing integration of existing systems over new content, reshaping Barotrauma's roadmap (94% positive on Steam).

Tools Engineering Intern · 11/2017 – 04/2018

YAGER Entertainment · Berlin, Germany

- Built C++/Python developer tooling that saved 2 hrs/week per developer across asset and debugging workflows.

EDUCATION

B.Sc. Industrial Engineering, University of Hamburg (2017–2020)

PERSONAL PROJECTS

Community Developer & Organizer · Civilization Players League · 09/2019 – Present

- Co-founded the Civ VI World Cup and organized the volunteer team of its balance mod, now used by 220,000+ players; 7 years of contributing design proposals and Lua code; built esports teams that won 2 world titles.

SKILLS

Product & Delivery: Roadmapping, Prioritization, Requirements, Risk & Stakeholder Management, KPIs, Agile/Scrum

Engineering: C++, C#, Python, SQL, Lua, PostgreSQL, Power BI

Tools & Languages: Git, Visual Studio, Jira, Trello, Perforce · German, English
